

HARVEST INSTALLATIONS

HARVEST SMS ALERTS

24 Hour monitoring of your Constant Humidity Controllers, with text alerts for any interruption in efficient drying. Single, double and treble burner sets all easily monitored. Multi-burner sets at same location can be easily incorporated to give complete farm coverage with minimal capital cost.

Reporting directly to up to four pre-programmed mobile phone numbers, the HARVEST SMS ALERTS system will send a text message giving a daily status text and respond immediately to report any burner problem or site power failure.

Full status messages can also be requested at any time from any phone via text commands.

Optional temperature sensors can be added to the HARVEST SMS ALERTS system. Up to eight sensors can be added to keep a watching eye on store conditions. Alternatively, a single sensor can be used to monitor ambient conditions and alert when optimal cooling conditions are available.

Minimal installation and easy set-up from any mobile phone. Pay as you go, or contract SIM means cheap cover for as long as required with a provider that works where you do.
